PROFESSIONAL SUMMARY

Full Stack Developer with over 14 years of experience in the technology industry, working on large-scale projects in civil construction, public transportation, government, and public safety sectors. Strong expertise in Microservices Architecture, Service-Oriented Architecture (SOA), and SOLID principles, with hands-on experience building scalable, maintainable, and high-performance systems. Strong expertise in .NET/C#, Azure, RESTful APIs, and modern front-end frameworks (Angular, React). Experienced in applying agile methodologies and leveraging AI tools (such as GitHub Copilot) to improve productivity and code quality. Certified in Microsoft Azure Fundamentals (AZ-900).

PROFESSIONAL EXPERIENCE

Full Stack Developer

Framework Digital · Full-time **Jul 2022 – Present**

As a Full Stack Developer, I design, develop, and maintain enterprise-level administrative systems for MRV, ensuring high performance, scalability, and security. I work on both frontend and backend, integrating cloud-based solutions and mentoring junior developers. I also work with GraphQL to build flexible and efficient APIs, enabling optimized data fetching and better performance for client applications. My main responsibilities include:

- **System Development & Maintenance:**
 - **Third-party payment system:** Automated and optimized payment processes for suppliers and service providers, reducing manual workload and errors.

- **Internal ticketing system:** Designed a solution for registering, tracking, and resolving internal company issues, improving operational efficiency.
- **Apartment delivery system:** Built a platform to manage the apartment handover process, including inspections and future maintenance tracking.
- **Technical Leadership & Collaboration:**
 - Mentored junior developers, providing guidance on best coding practices, software architecture, and problem-solving strategies.
 - Conducted code reviews, improving code quality and team productivity.
 - Worked closely with cross-functional teams to ensure alignment between business requirements and technical implementations.
 - Applied SOLID principles and Clean Architecture practices to ensure maintainability, scalability, and testability.
 - Leveraged AI-assisted development tools (e.g., GitHub Copilot) to accelerate development, refactoring, and code quality improvements.
 - Designed and implemented backend services following Microservices and Service-Oriented Architecture (SOA) principles.
- **Key Technologies:**
 - **Backend:** C#, ASP.NET MVC, SignalR, Entity Framework, GraphQL
 - **Frontend:** React, Angular Material
 - **Cloud & DevOps:** Azure AD, Azure DevOps (CI/CD), Application Insights, Azure App Service
 - **Database:** SQL Server
 - **Agile:** Scrum for continuous delivery and process optimization

Software Developer

DevmaticTech · Part-time **Oct 2022 – Dec 2024 (2 years 2 months)** · Remote (USA-based)

As a **Full Stack Developer**, I contributed to the development and maintenance of a **sports betting platform**, working across both backend and frontend to deliver scalable and reliable features.

I developed services in **.NET** to integrate with external **sports data APIs**, processing real-time match data and betting information used by the platform. On the frontend, I worked with **Vue.js** to implement user-facing features and ensure a smooth and responsive betting experience.

I also contributed to the development of internal **administrative dashboards using Blazor**, enabling efficient monitoring and management of betting operations.

Additionally, I used **Docker** for containerization and deployment, and collaborated with the team through **GitHub** for version control and code reviews. Throughout development, I followed **SOLID principles and software engineering best practices** to ensure maintainable, scalable, and reliable systems.

- Designed and optimized queries in **PostgreSQL**, ensuring efficient data retrieval.
- Built and improved administrative dashboards using **Blazor**, enhancing system management.
- Utilized **Docker** for containerization and service scalability.
- Managed source control and collaborated on projects using **GitHub**.

Software Developer

Cast Group · Full-time **Sep 2019 – Jun 2022 (2 years 10 months)**

Worked on the creation and maintenance of systems for the São Paulo Metro, ensuring the reliability and scalability of software to meet public transportation needs. Used GraphQL to improve data efficiency and flexibility, allowing clients to request only the data they needed, reducing overfetching and improving overall performance in high-demand environments.

- **.NET Core and Entity Framework:** Chosen for performance and efficiency in developing modern and scalable applications, using the Mediator pattern with MediatR to facilitate communication between components, promoting a cleaner, decoupled design.
- **Angular:** Provided dynamic interfaces and an improved user experience.
- **Oracle Database:** A robust database for handling high volumes of transactional data.
- **GitLab CI/CD:** Used for automating integration and continuous delivery pipelines, code management, branch control, and automated deployments.
- Followed SOLID principles and clean code practices across backend services.
- Applied Service-Oriented Architecture (SOA) concepts to decouple systems and improve integration flexibility.

Software Developer

PSG Tecnologia Aplicada · Full-time **Sep 2016 – Sep 2019 (3 years 1 month)**

Participated in the development and maintenance of accounting systems used by the state government of Mato Grosso do Sul. The main goal of the system was to manage the entire bidding process, from budget allocation to payment to the service provider, ensuring transparency and efficiency in public management.

- **C# and .NET Framework:** Used for developing robust and secure features.
- **SQL Server:** Chosen for its reliability in handling critical financial data.
- **Azure DevOps:** Used for CI/CD management, deployment automation, task control, and development lifecycle management.
- **Elasticsearch:** Implemented for log data management and analysis, helping with system monitoring and troubleshooting.
- **Git:** Version control tool for efficient collaboration and code change tracking.

Software Developer

Compnet Tecnologia · Full-time **May 2012 – Sep 2016 (4 years 5 months)**

Led the development and maintenance of **georeferencing and real-time communication systems for public safety agencies** (Police, Fire Department, and Civil Defense), enabling fast incident response and efficient vehicle dispatching.

- Designed real-time tracking solutions using **Node.js, WebSocket, and SignalR**.
- Integrated **Google Maps API** for location tracking and emergency response planning.
- Migrated frontend from **KnockoutJS to AngularJS** for a more scalable and maintainable architecture.
- Implemented **Ninject for dependency injection**, improving system flexibility and testability.
- Used **SQL Server** to manage incident data and real-time vehicle location tracking.
- Managed version control and development lifecycle using **Team Foundation Server (TFS)**.

EDUCATION AND CERTIFICATIONS

- Microsoft Certified: GitHub Copilot (GH-300) - 2026
- Microsoft Certified: Azure Fundamentals (AZ-900) - 2025
- Certificate in Software Architecture, Eduardo Pires - 2015
- Systems Analysis Degree, UNIDERP Anhanguera - 2011

TECHNICAL PROFICIENCIES

- (14+ years): .NET/C#, JavaScript, HTML, CSS, SQL Server, jQuery, Razor
- (8+ years): REST APIs, JSON, OData, Git, SOLID
- (7+ years): Angular, TypeScript, SignalR, Bootstrap, KnockoutJS
- (6+ years): Microservices Architecture, Service-Oriented Architecture (SOA), CI/CD
- (5+ years): Azure, GraphQL, Google Maps API
- (4+ years): Node.js, MongoDB, Oracle DB, RabbitMQ, React, Kendo UI
- (3+ years): Java, Vue.js, PostgreSQL, Docker, Blazor
- (2+ years): AI Tools (GitHub Copilot)

LANGUAGE PROFICIENCY

- English (Advanced)
- Portuguese (Native)
